

Investment

A complete biologic report and surgical plan is \$2,000, which includes:

- Multi-expert case review
- Personal protocol oversight by Dr. Golden and team
- Your provider's consultation with detailed findings
- Confidence in treatment

What patients are saying

"The Visiogenics scan clearly showed the reality of existing jaw cavitations. This confirmed for me the probability of having areas of inflammation that had been lingering in my jaw and most likely contributing to my systemic illness —with an obvious connection to my autoimmune disease, body aches, fatigue, and neck/back discomfort.

Seeing that alignment between the visual findings and my symptoms which healed after surgery brought a sense of clarity I hadn't experienced with any other imaging.

With Dr. Golden's oversight, I felt fully supported going into surgery— confident that the treatment plan addressed the true biologic state of my jaw."

-Alina, Biological Dental Hygienist & Patient

Patients often say this report is the first time they felt seen, heard, and hopeful.

With the trusted expertise of Dr. Linda Golden behind every case, this biologic CBCT is a cornerstone of modern biologic surgical care.

What sets this scan apart?

This isn't a standard scan—it's a Biologic Surgical Map created using a method developed by Prof. Shahram Ghanaati, a specialist in Oral and Maxillofacial Surgery and internationally recognized expert in biologic tissue healing.

He is a triple doctorate in medicine, dentistry and science (MD, DMD, PhD) from the German universities Johannes Gutenberg University, Mainz and Johann Wolfgang Goethe University, Frankfurt.

Each case includes

Human-led biologic visualization—No AI shortcuts

Triple-layer expert review—by an engineer, radiologist and surgeon

Oversight by Dr. Golden

A finalized surgical plan sent directly to your provider

Why it matters

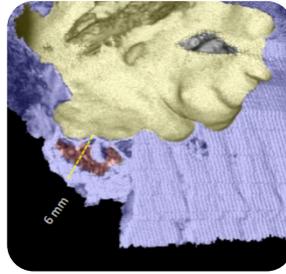

The **Biologic CBCT Report** is more than imaging – it's a diagnostic tool designed to give your provider the clarity needed to prepare for surgery and support true healing. **It helps your care team to:**

Identify Cavitations and Areas of Potential Chronic Inflammation often missed in standard scans

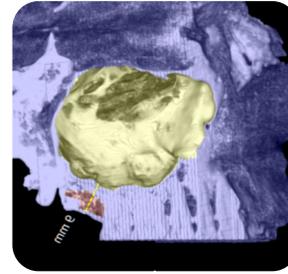

Visualize Hidden Infection from past extractions, root canals, other dental procedures or accidents

Plan Surgical Care with Precision – always keeping whole-body health in focus

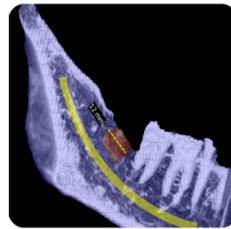

Cavitations after permanent tooth extraction

Bone trauma

This Biologic CBCT Visualization is a cornerstone of modern biologic surgical care and precision

This clarity is especially valuable for patients who are looking for answers and are *still experiencing persistent, unexplained symptoms* that haven't been resolved through conventional approaches.

Visiogenics creates a personalized 3-D Biologic Visualization

Your case is reviewed by an expert team under Dr. Golden's guidance

A full biological surgical map is delivered and discussed with your provider

You and your provider discuss the findings and your next steps

"It's biologic insight for surgical precision. A transformative approach to understanding silent bone conditions. This is often missed in standard imaging."

Shahram Ghanaati MD,DMD,PhD.
